Fuel Gas Fitter Requirements (RSA 153:27)

In accordance with this New Hampshire Statute, it is **unlawful** for anyone to do gas fitting without a license unless they are exempt from the licensing requirements. No one is exempt from the Fuel Gas Code requirements. All installations, regardless of who performs the work, must comply with New Hampshire and Nashua Mechanical and Fuel Gas Codes.

Exceptions for owners of existing single-family stand-alone structure (RSA 153:36)

The fuel gas licensing requirements do not apply to anyone who performs fuel gas fitting within an existing **single-family residence owned or occupied by him or her**. This exception only applies if the owner is actually installing the work. Owners who apply for and are issued permits and then decide to contract with a licensed gas fitter, for all or a portion of the work, shall have the licensed gas fitter apply and obtain a permit for the work being done by the licensed gas fitter. **The Owner shall not obtain this permit and then have someone else (licensed or not) do the work under the permit obtained by the owner.**

I have read and understand the above. I understand that making a false statement on this form is an offense against NH law. I attest the place where I intend to perform gas fitting work is a single-family stand-alone residence.

MECHANICAL INSPECTIONS REQUIRED

The following inspections are required in Nashua as a minimum. Additional inspections may be necessary, depending upon specific circumstances. You must call 589-3080 at least one day in advance for these inspections before proceeding to the next building phase.

1. **Fuel fired appliances** – After installation, prior to any concealment; start up and testing
2. **Gas piping** – Natural and/or LP – Prior to any concealment and setting of meter or tanks; any additional branches to existing piping
3. **Storage tanks**
 - a. Underground – After tank and related piping are installed and prior to backfilling
 - b. Above ground and/or in buildings – After installation and testing (May be scheduled at time of appliance inspection if applicable)
4. **Fire and smoke dampers** – Prior to any concealment
5. **Ductwork and smoke detectors** – Prior to insulation and ceiling tile installation or any concealment
6. **HVAC equipment, general** – Prior to any concealment; at completion and upon start up
7. **Metal chimneys** – Prior to any concealment; after installation
8. **Masonry fireplaces and chimneys** (3 inspections minimum)
 - a. Footing
 - b. At completion of the throat (smoke chamber) and prior to start of the chimney position
 - c. At completion
 - d. At the discretion of the inspector
9. **Wood stoves, pellet stoves and factory built fireplaces** – Prior to any concealment of vent pipe, chimney, or fireplace; at completion of installation
