

Battery Basics

Given the number of products that rely on battery power, it's important to know how to properly dispose of batteries once they have died. The following is a list of battery types you are likely to find around the house and the appropriate way to dispose of them.

Name ~ Zinc Carbon or Zinc Chloride

Rechargeable ~ No

Description ~ labeled as "all purpose," "general purpose," "heavy duty," or "super heavy duty"

Disposal ~ these batteries are non-hazardous and can be placed in the trash.

Name ~ Alkaline Manganese

Rechargeable ~ No

Description ~ used in most common household applications, typical sizes range from AAA to D

Disposal ~ batteries with an expiration date after **1998** can be placed in the trash. Older batteries may contain mercury and should be taken to a household hazardous waste collection.

Name ~ Lithium Batteries

Rechargeable ~ No

Description ~ commonly used in cameras

Disposal ~ these are potentially reactive if not completely discharged and should be handled as **hazardous waste**.

Name ~ Button Cells

Rechargeable ~ No

Description ~ small, disc shaped batteries commonly used in hearing aids, medical devices, watches, calculators, and cameras.

Disposal ~ mercuric oxide and alkaline manganese buttons may contain mercury if purchased prior to 5/13/96 and should be brought to a household **hazardous waste** collection.

ALL **RECHARGEABLE** and **HAZARDOUS** batteries must be placed individually in a plastic bag when stored. All **BUTTON BATTERIES** must be placed on a piece of paper, separated & covered with tape to prevent contact.

2021 Household Hazardous Waste Collections

Sat. April 17 ~ Nashua Thurs. June 3 ~ Nashua (3 > 7 pm) Sat. Aug. 7 ~ Nashua

Sat. Aug. 28 ~ Pelham Sat. Oct 2 ~ Nashua Sat. Nov 6 ~ Nashua

Collection Time: 8 am > noon unless otherwise noted
